

# I LEARN ABOUT RENEWABLE energy sources, PROTECT MY HEALTH and the environment

Through different activities, the students managed to reduce the electricity consumption of their school and, most importantly, learn in an interactive way how to adopt energy saving as an everyday practice.

## ONE SIGNIFICANT ACTIVITY

### Afforestation

Through the project: "I turn my schoolyard green", a team of students planted around 250 small trees and bushes which were an offer of the local Forest Department. In collaboration with the Municipality of Volos, a system

of automatic watering was installed. Students learned with this activity that trees not only create a beautiful environment but contribute to the reduction of the greenhouse effect by absorbing the CO<sub>2</sub>. In addition, they help prevent noise pollution and improve the microclimate of the area.
